Copilot in Fabric

OneLake

Microsoft Purview

Microsoft Fabric

… and everything will get Copilot

… and everything ~~will~~ ~~get~~ has Copilot (and more)

The data platform for the era of AI

AI-powered data platform

Give your data teams all the AI-powered tools they need for any project in an optimized SaaS environment

Open and AI-ready data lake

Access your entire multi-cloud data estate from a single data lake and ensure data is ready to power AI innovation

AI-enabled business users

Empower everyone to better understand data with AI-enhanced experiences and visuals embedded in the apps they use everyday

Mission critical foundation

Deploy and manage Fabric with category-leading performance, instant scalability, shared resilience, and built-in security, governance, and compliance

data storage

it’s all Delta (Parquet)

OneLake for all data

"The OneDrive for data"

OneDrive
for documents

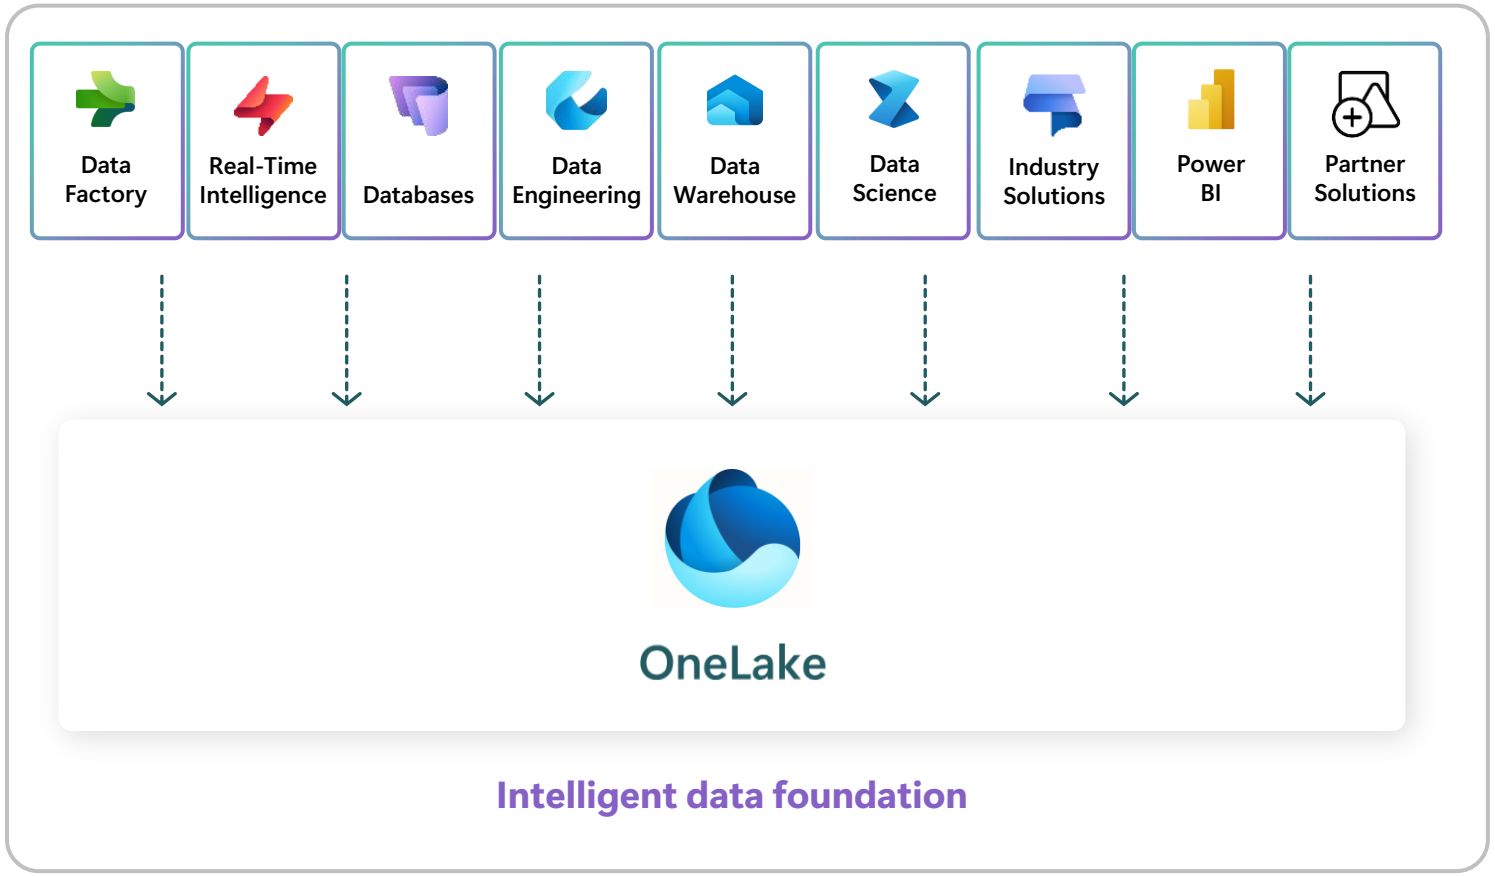

OneLake
for data

OneLake provides a data lake as a service without you needing to build it

OneLake for all Data

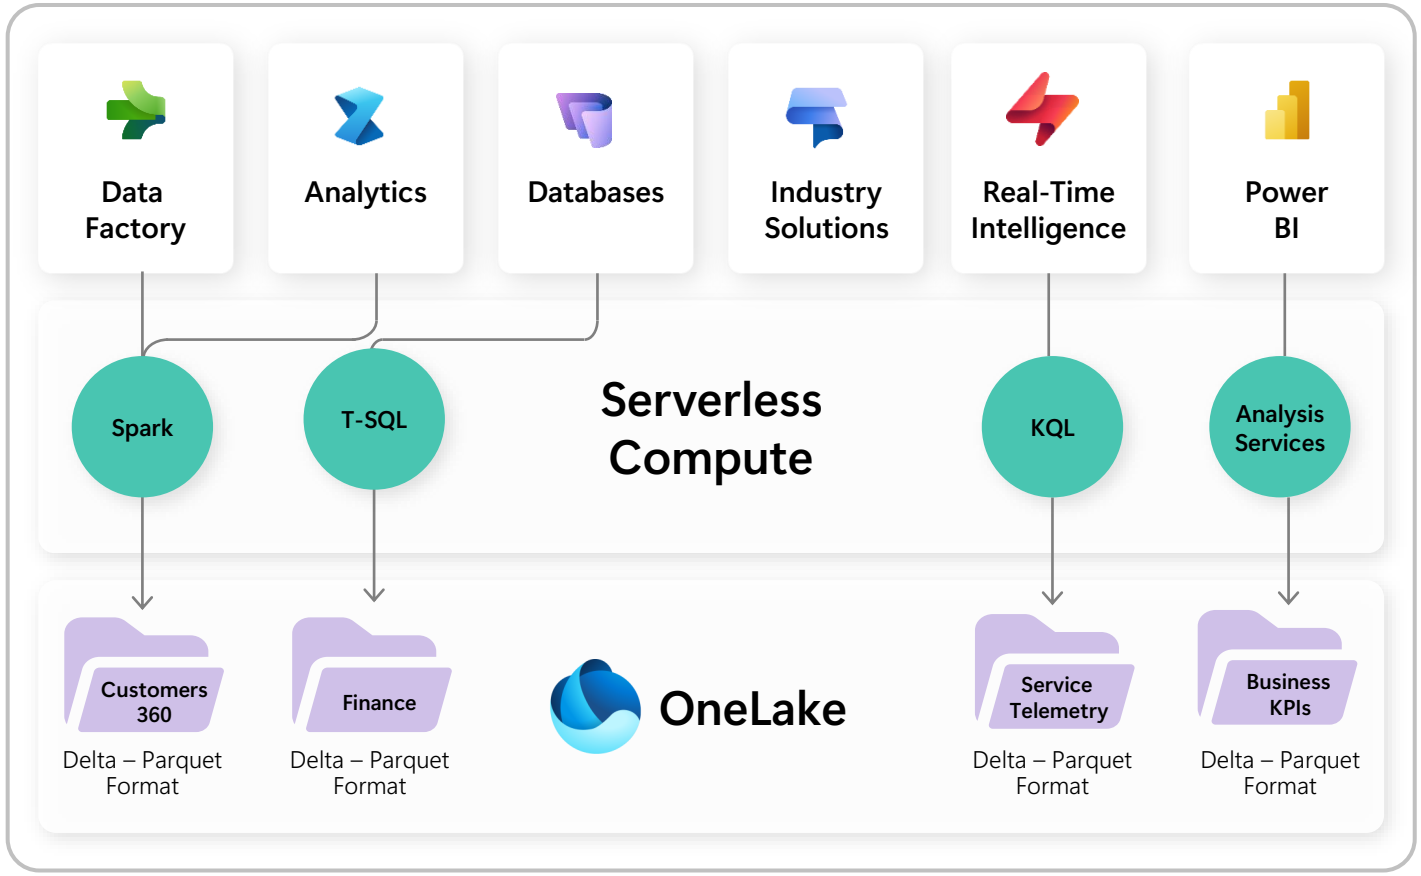

"The OneDrive for Data"

- A single SaaS lake for the whole organization
- Provisioned automatically with the tenant
- All workloads automatically store their data in the OneLake workspace folders
- All the data is organized in an intuitive hierarchical namespace
- The data in OneLake is automatically indexed for discovery, MIP labels, lineage, PII scans, sharing, governance and compliance

One Copy for all computes

Real separation of compute and storage

All the compute engines store their data automatically in OneLake as data items.

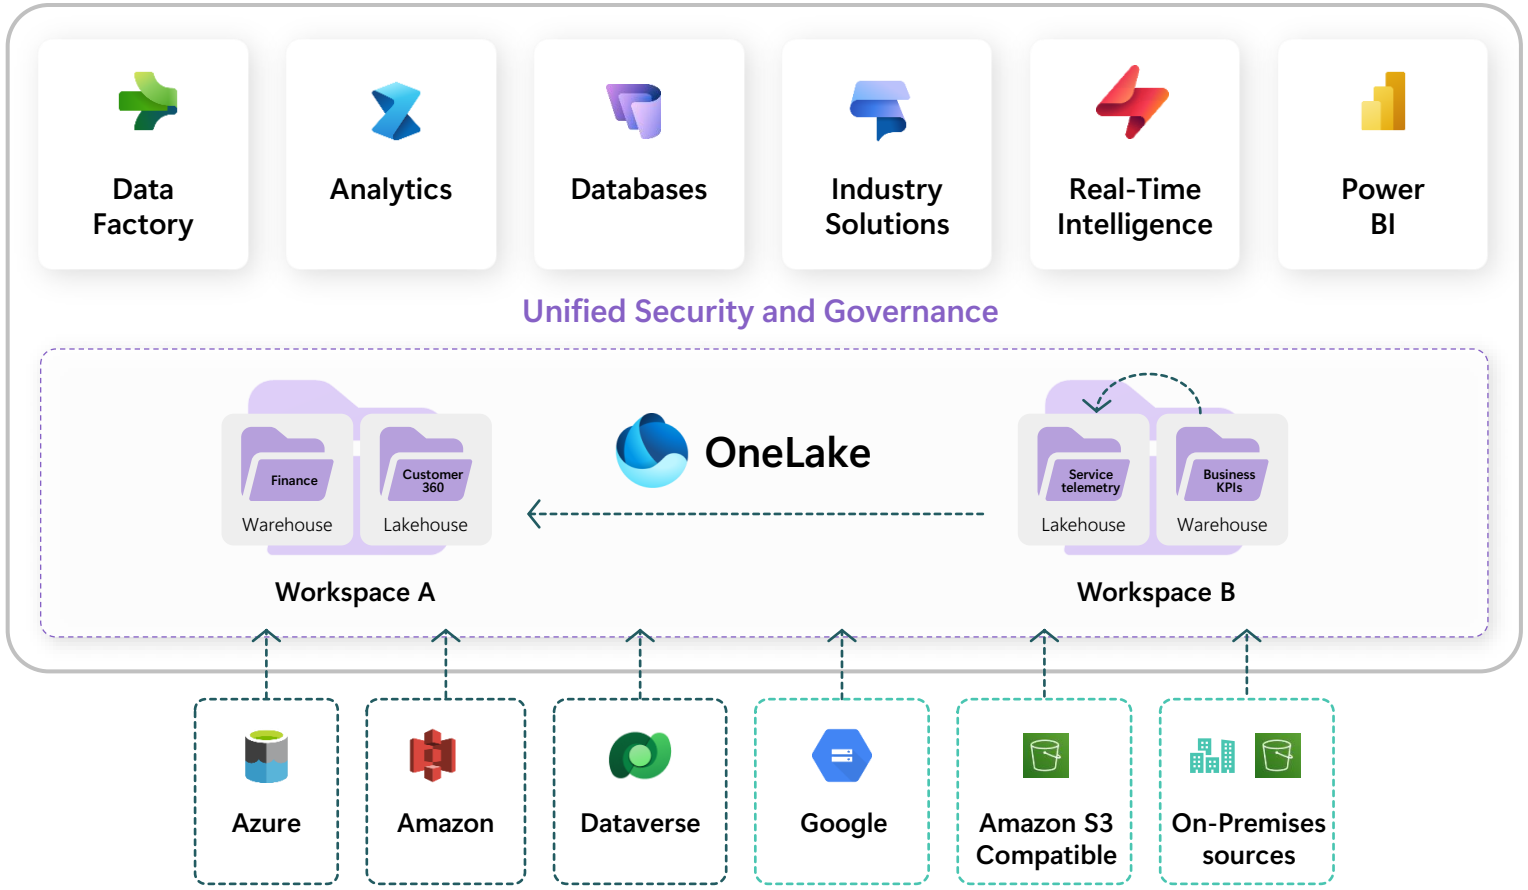

The data is stored in a single common format.

Delta – Parquet, an open standards format, and it is the storage format for all tabular data in Fabric.

All the compute engines have been fully optimized to work with Delta Parquet as their native format.

Shortcuts virtualize data across domains and clouds

No data movements or duplication

A shortcut is a symbolic link which points from one data location to another.

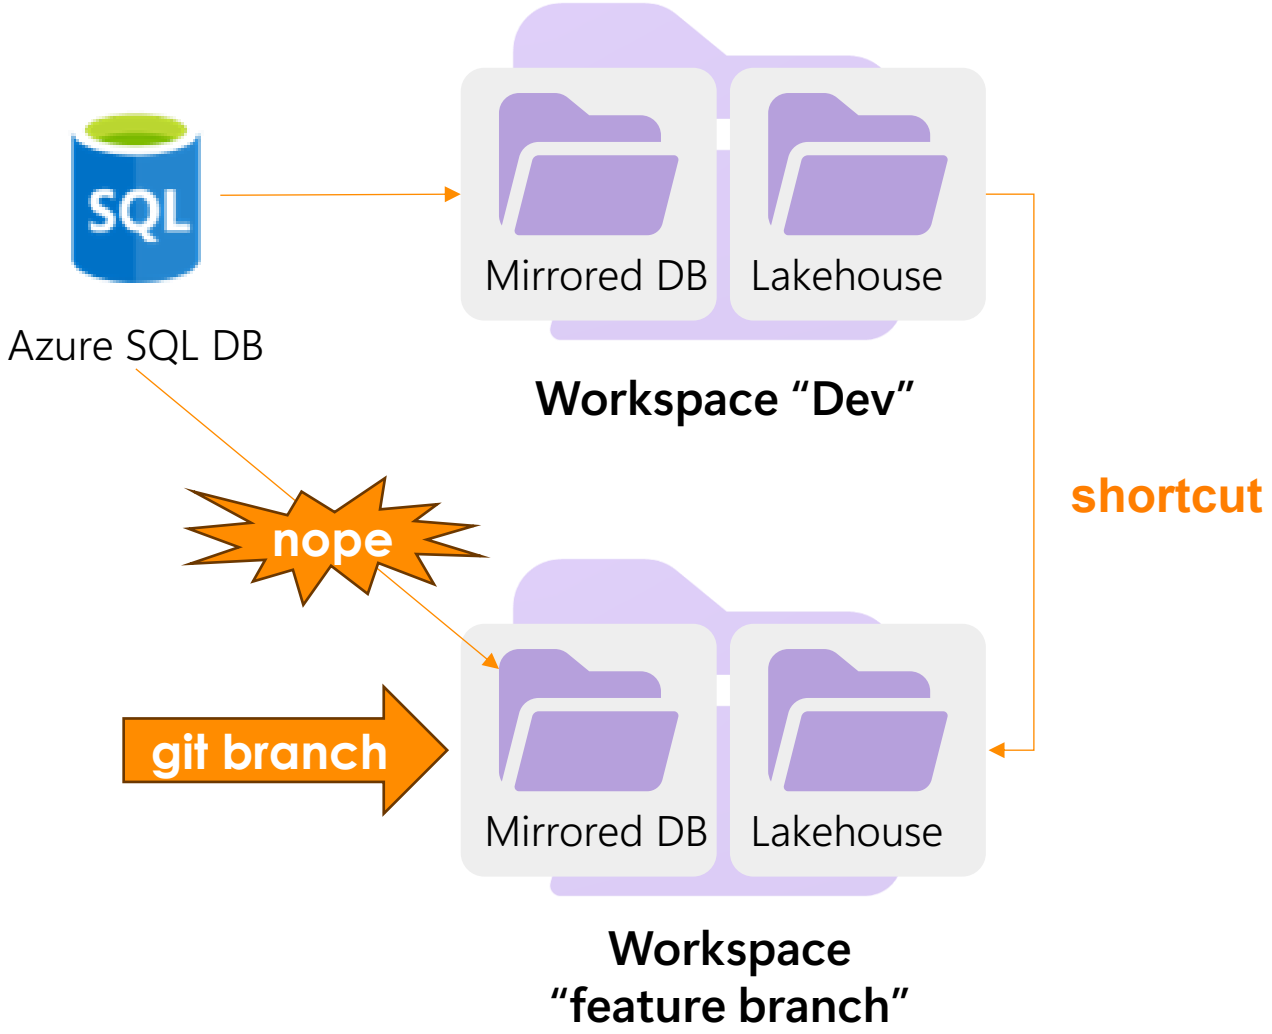

Create a shortcut to make data from a warehouse part of your lakehouse.

Create a shortcut within Fabric to consolidate data across items or workspaces without changing the ownership of the data. Data can be reused multiple times without data duplication.

Existing ADLS Gen2 storage accounts and Amazon S3 buckets can be managed externally to Fabric and Microsoft while still being virtualized into OneLake with shortcuts.

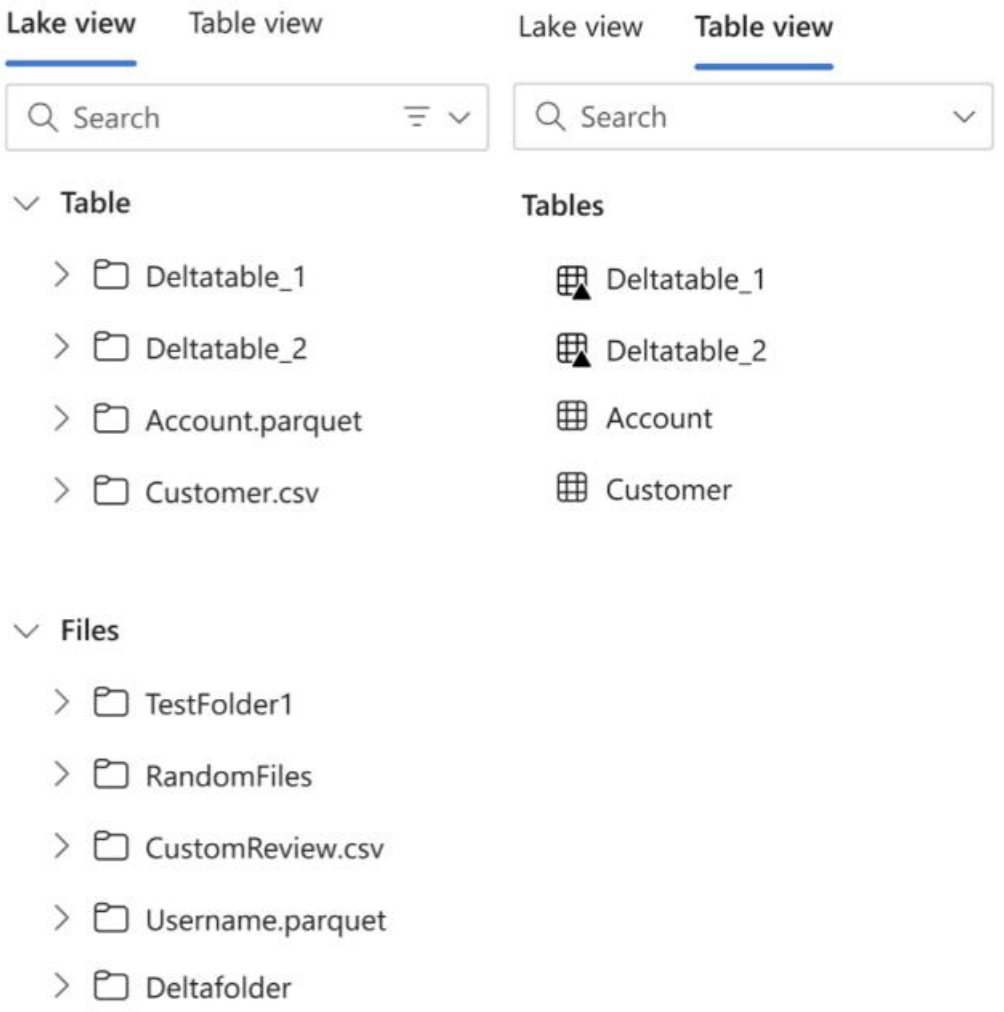

All data is mapped to a unified namespace and can be accessed using the same APIs including the ADLS Gen2 DFS APIs.

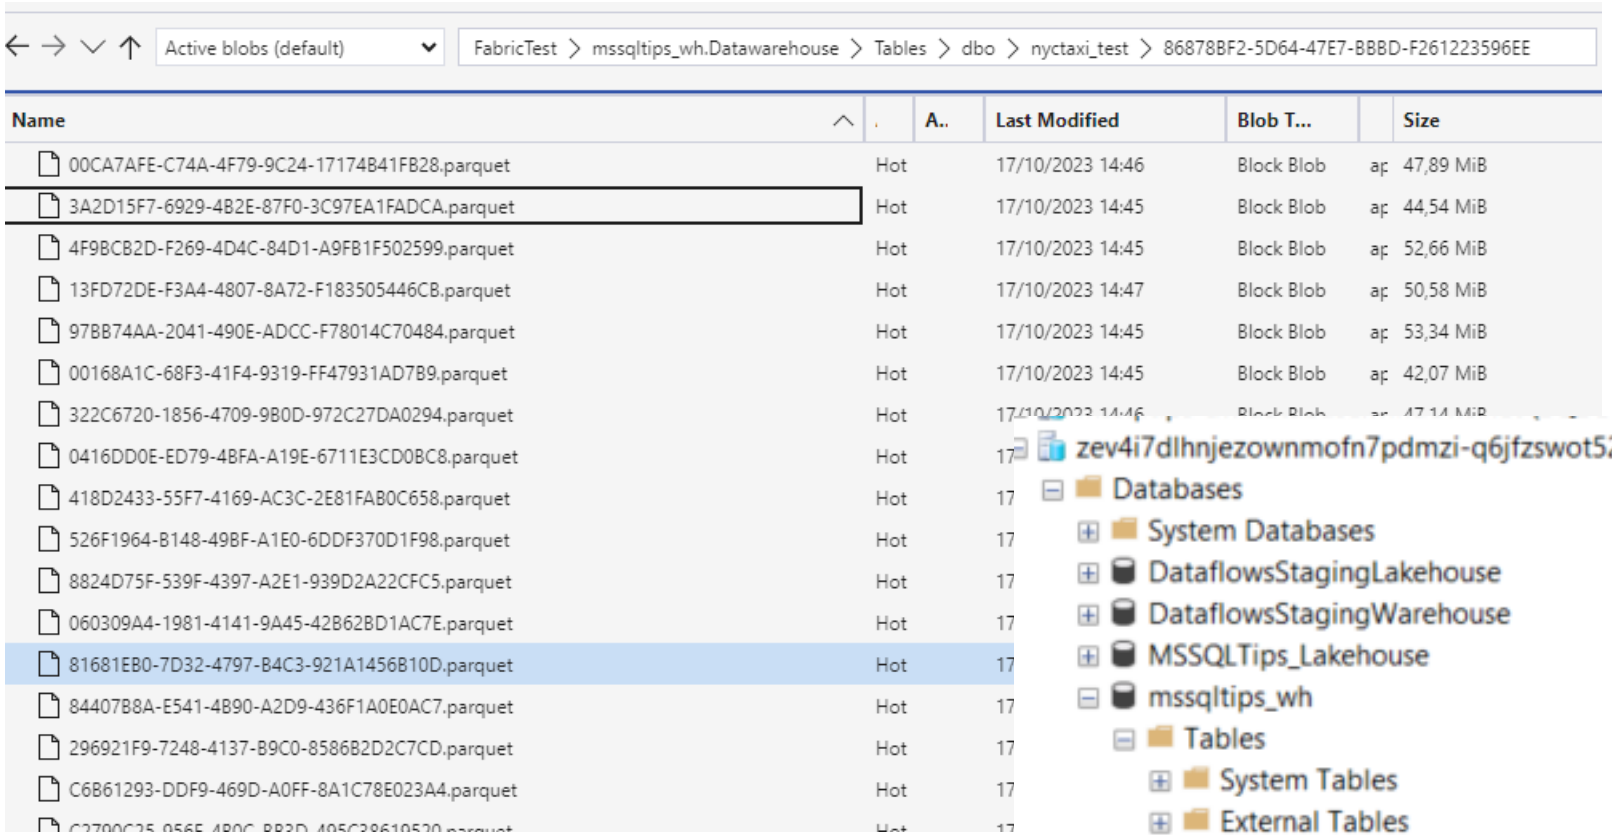

shortcuts and feature branches

OneLake working with both files and tables

demo

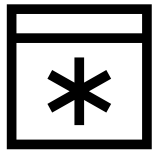

data warehouse

Data Warehouse

- Created in a workspace
- Full T-SQL Commands
- Several data ingestion methods

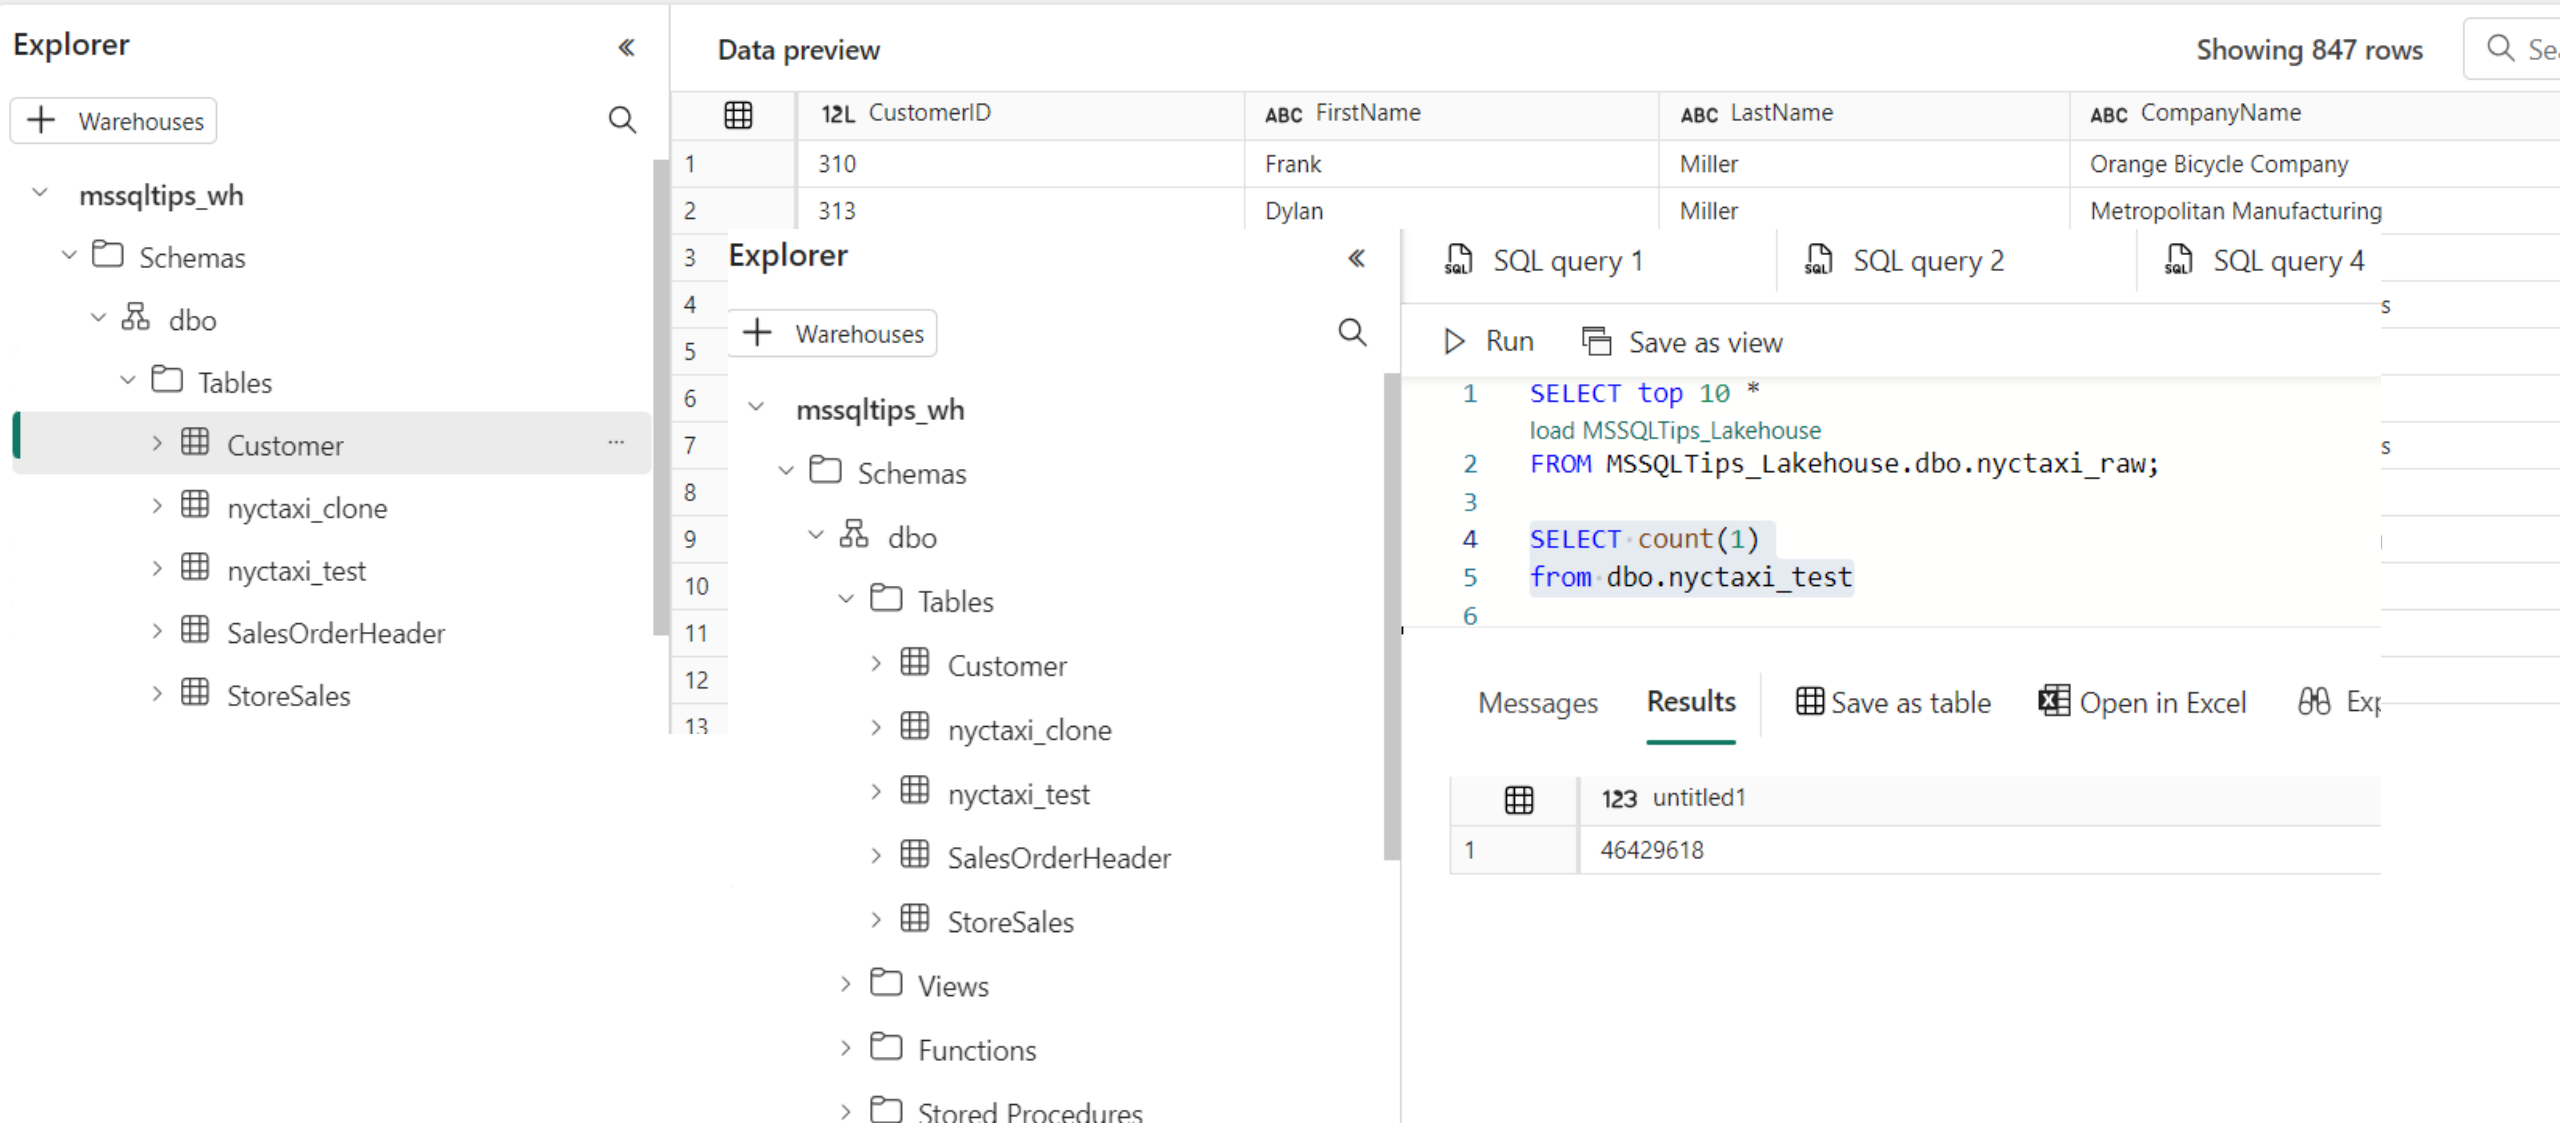

SQL Endpoint on the LakeHouse

- Automatically created with every LakeHouse
- Read-only T-SQL Commands
- Data ingested

this is not Synapse
Dedicated SQL Pools

Build your warehouse

Back in 2024...

Limitations

Warehouse supports many, but not all, of the table features offered by other databa

The following list shows some of the table features that aren't currently supported. D
change.

- Computed columns
- Indexed views
- Partitioned tables
- Sequence
- Sparse columns
- Surrogate keys on number sequences with Identity columns
- Synonyms
- Temporary tables
- Triggers
- Unique indexes
- User-defined types

Primary key, foreign key, and unique key

For Warehouse, PRIMARY KEY and UNIQUE constraint are only supported when NONCLUSTERED and NOT ENFORCED are both used.

FOREIGN KEY is only supported when NOT ENFORCED is used.

And now…

Limitations

At this time, the following list of commands is NOT currently supported. Don't try to use these commands. Even though they might appear to succeed, they could cause issues to your warehouse.

- `BULK LOAD`
- `CREATE USER`
- `FOR JSON` must be the last operator in the query, and so is not allowed inside subqueries
- Manually created multi-column stats
- Materialized views
- `PREDICT`
- Queries targeting system and user tables
- Recursive queries
- Schema and table names can't contain `/` or `\`
- `SELECT` - `FOR XML`
- `SET ROWCOUNT`
- `SET TRANSACTION ISOLATION LEVEL`
- `sp_showspaceused`
- Synonyms
- Triggers

- `VARCHAR(MAX)` is supported but limited
- `IDENTITY` is supported, but
  - only `BIGINT`
  - no `IDENTITY_INSERT`
  - no `seed` and `increment`
- no indexes
- constraints are still not enforced

Mirroring in Microsoft Fabric

Simplify near real-time intelligence

Fabric Mirroring enables adding existing databases and data warehouses to Fabric without any ETL.

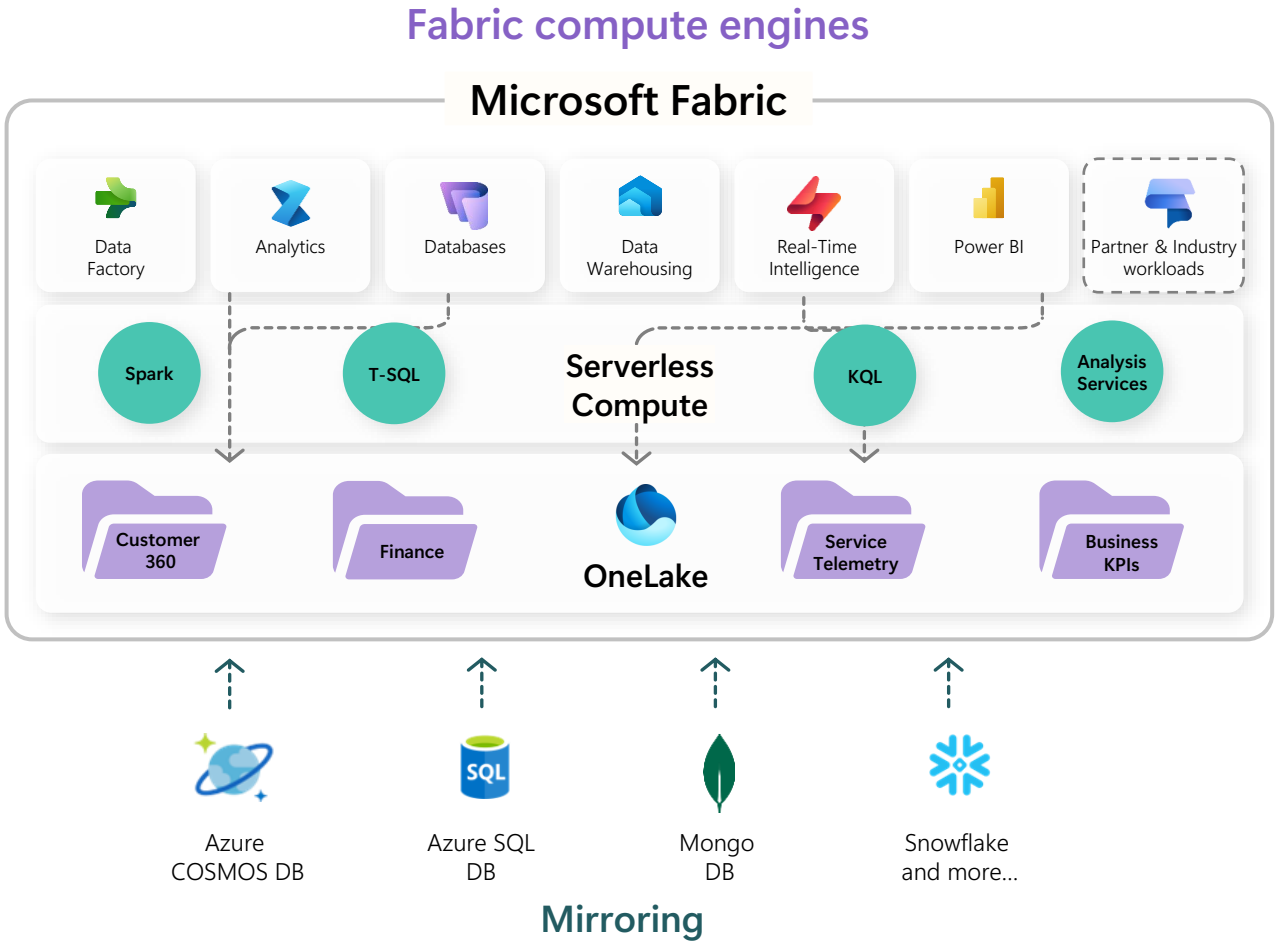

A full editing experience of the source database is available for the Mirrored database.

Data is replicated into OneLake in Delta format and kept up-to-date in near-real-time.

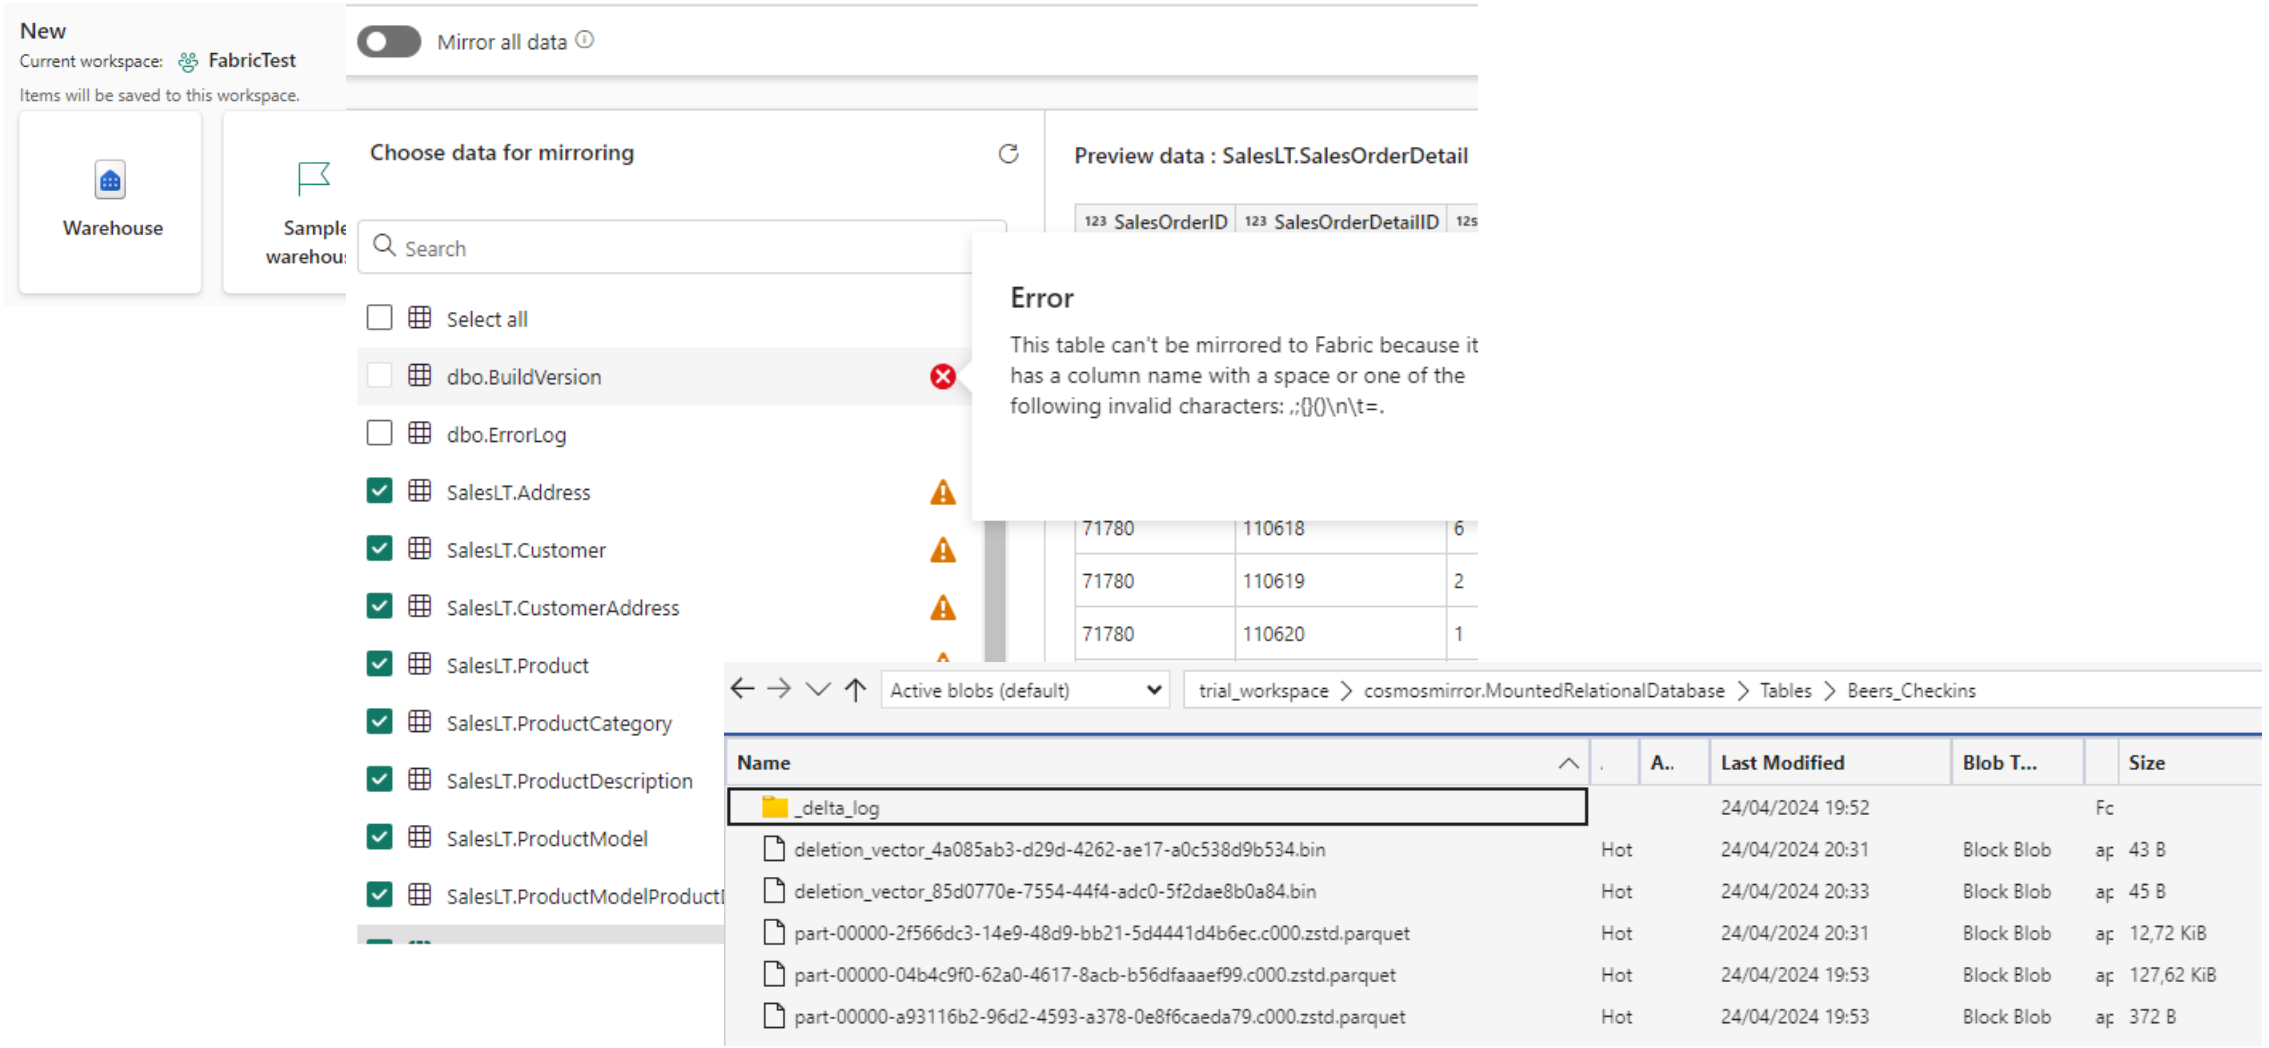

All the Fabric experiences instantly work with the OneLake replica.

Analysts and Data Scientists can work with real-time data.

The replica protects operational databases from analytical queries.

database mirroring

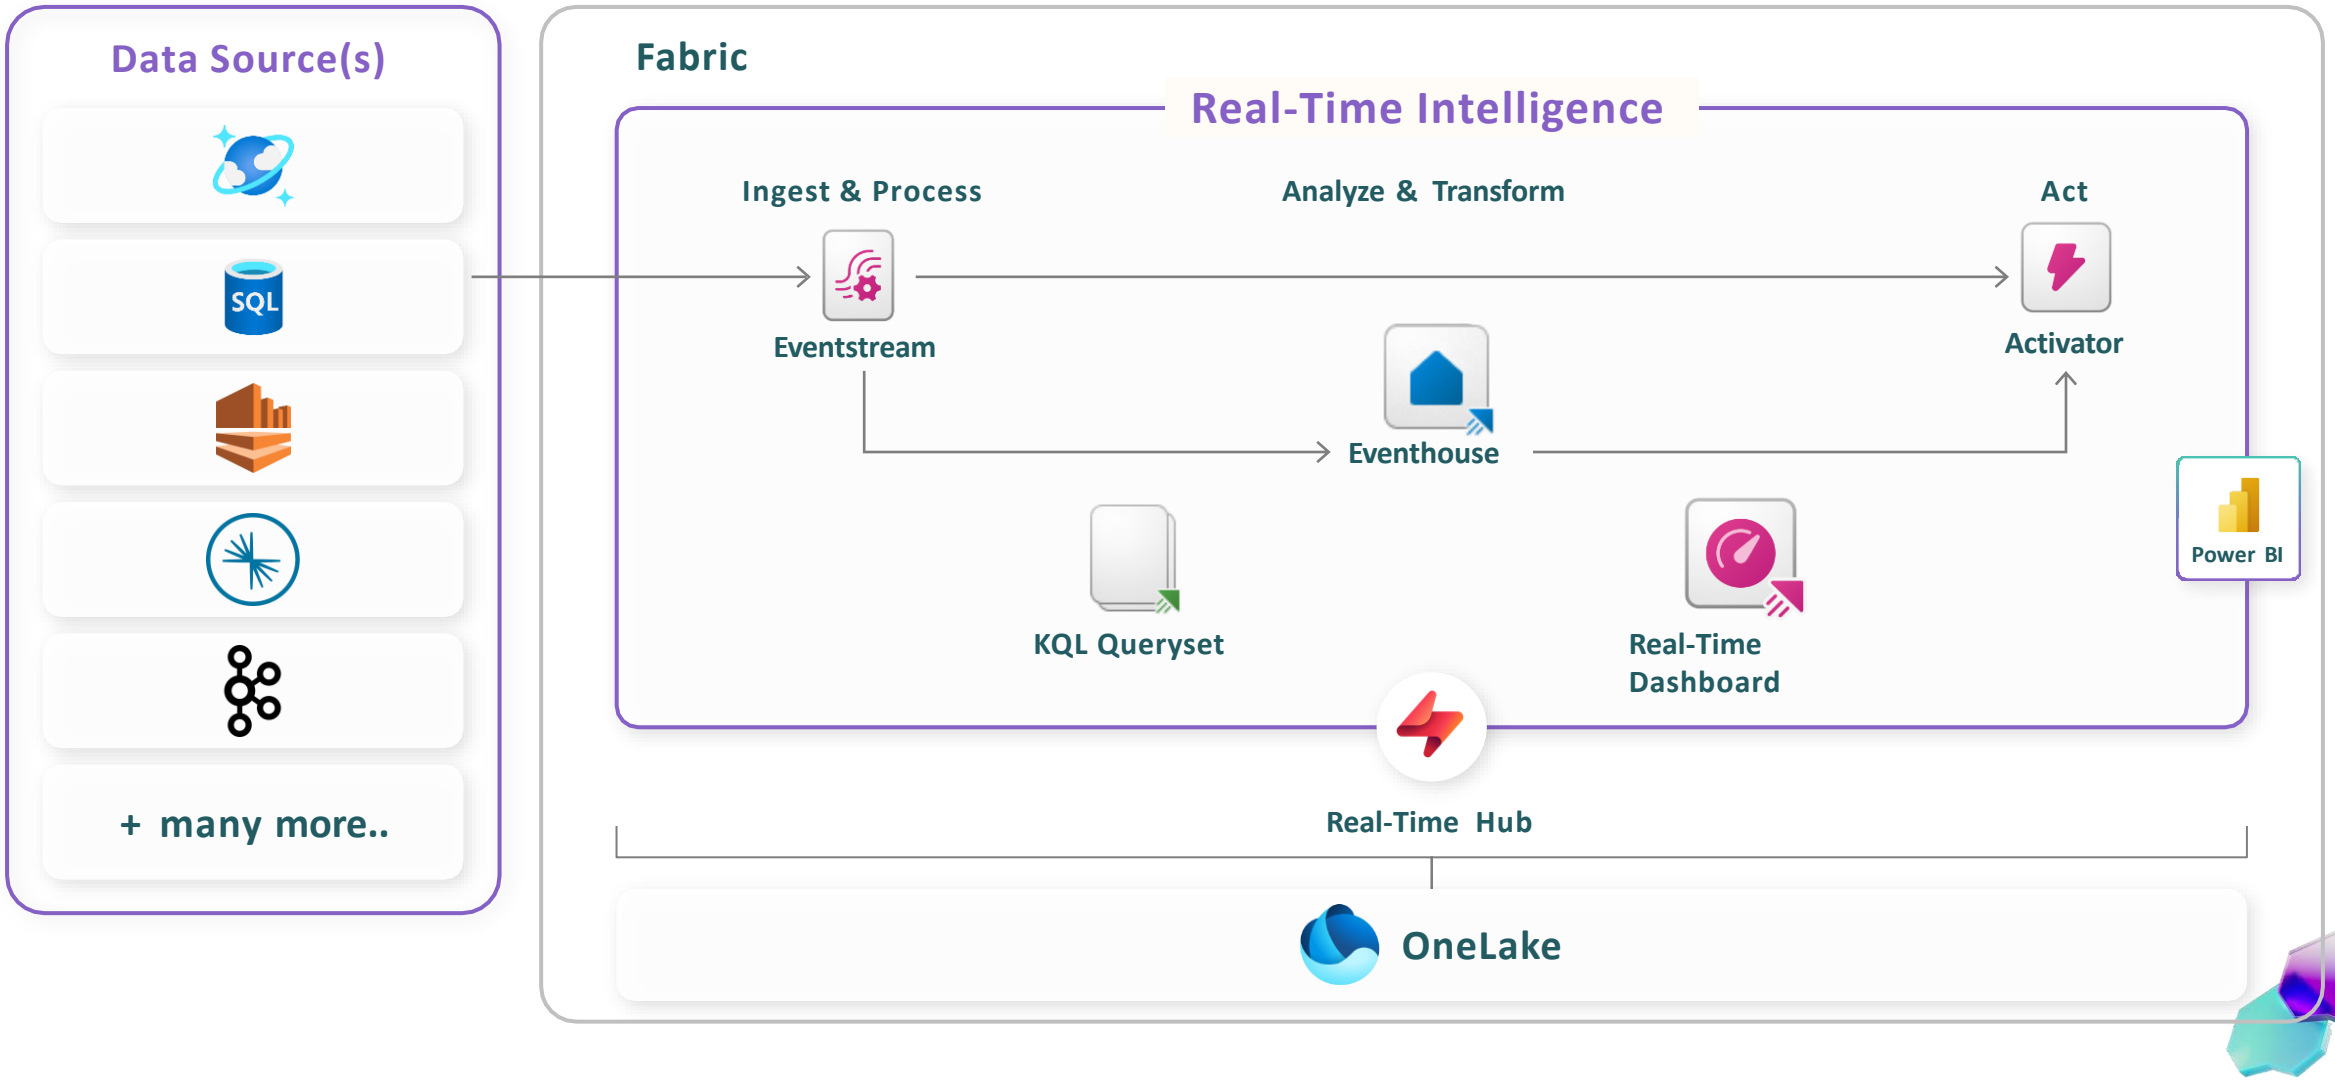

demo

real-time analytics

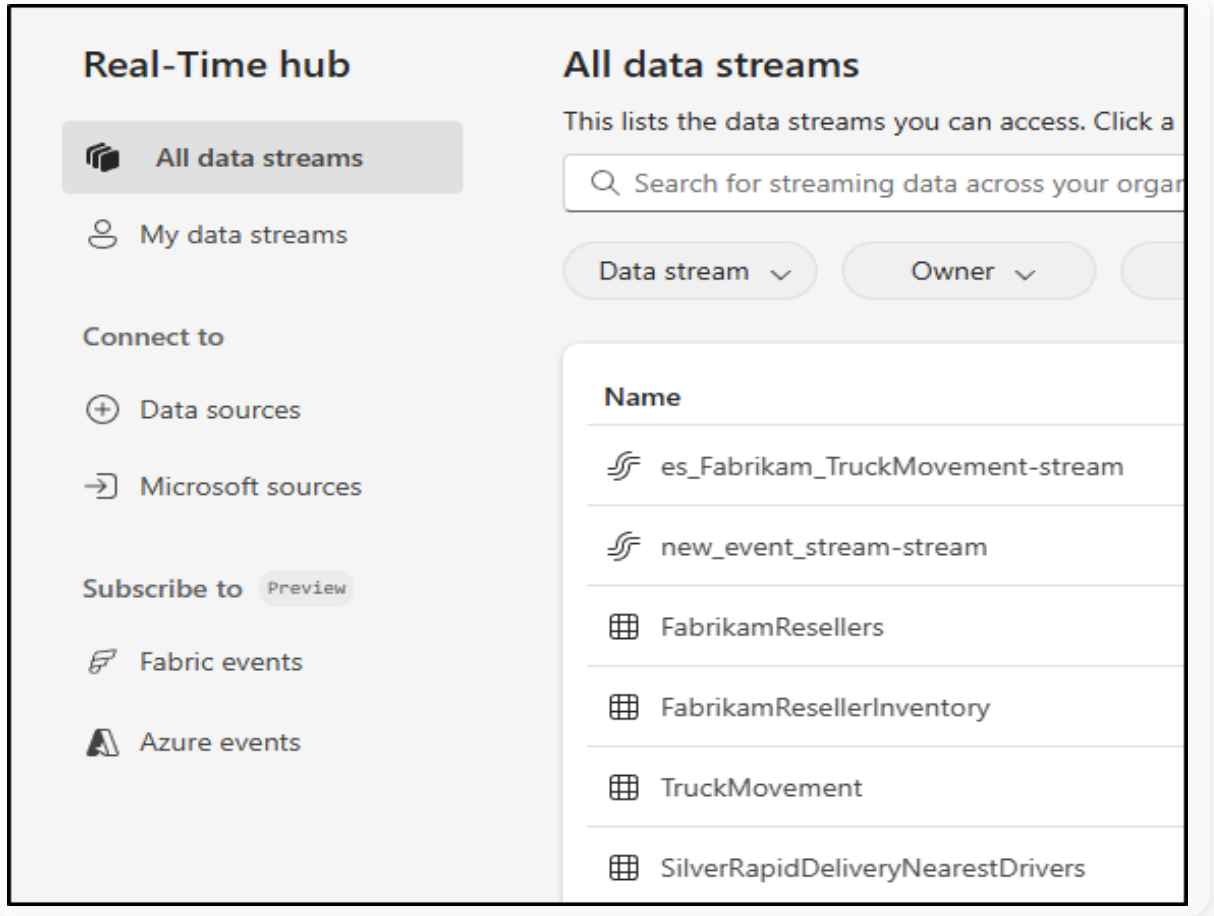

Components of Fabric's Real-Time Intelligence

Real-Time hub

Discover, manage, and reuse Real-Time data in one place

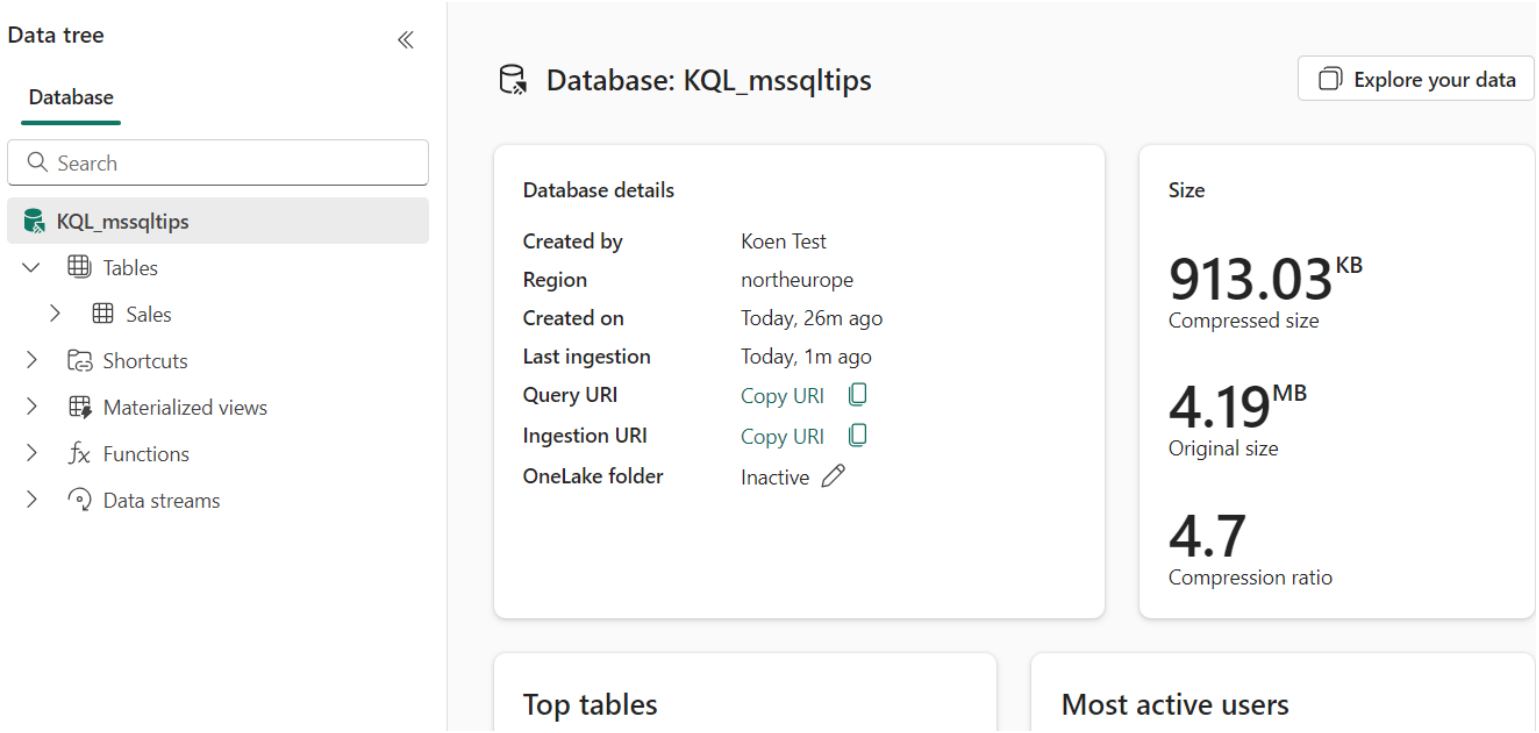

Central location within Fabric to discover, manage, and reuse real-time data across your entire organization. Every Fabric tenant is automatically provisioned with this hub. No extra steps needed to setup or manage it.

Data can be easily discovered by its stream type, owner, Item, and workspace

Abundant connectors for simplified data ingestion into fabric

You can create streams for the supported sources. After you create the streams, you can process them, analyze them, and set alerts on them

You will see all your organizational streams and Kusto Query Language (KQL) tables

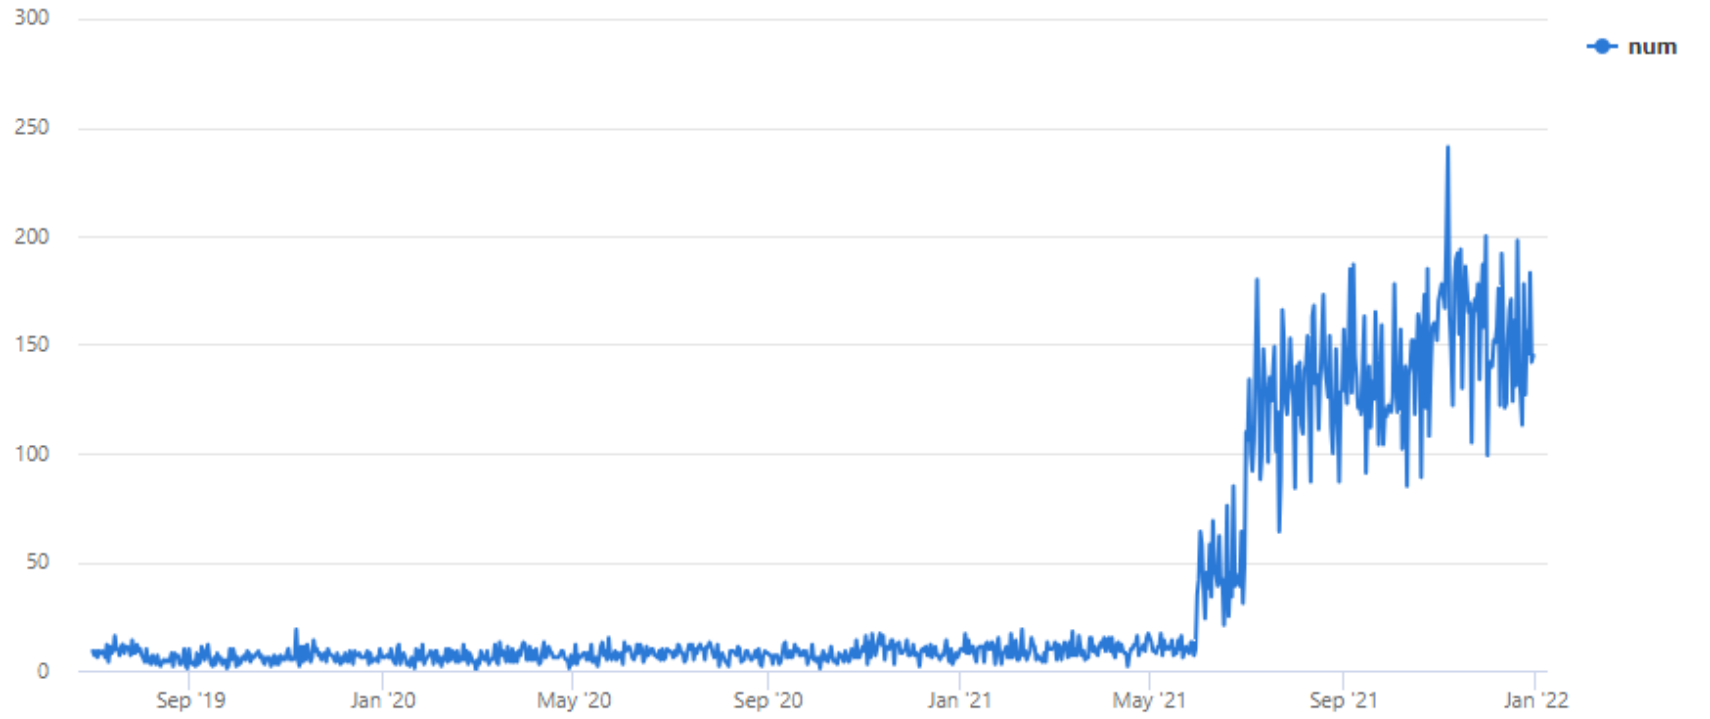

```
6  Sales
7  | summarize ItemsOrdered=sum(Quantity) by groupByExpression1=getyear(todatetime(OrderDate
8  | project myYear=groupByExpression1, ItemsOrdered
```

Table 1 | Stats

myYear	ItemsOrdered
2,019	1,201
2,020	2,733
2,021	28,784

```
let min_t = toscalar(Sales | summarize min(OrderDate));
let max_t = toscalar(Sales | summarize max(OrderDate));
Sales
| make-series num=count() default=0 on OrderDate from min_t to max_t step 1d
| render timechart

“Direct Query Mode”

Slow, but real time

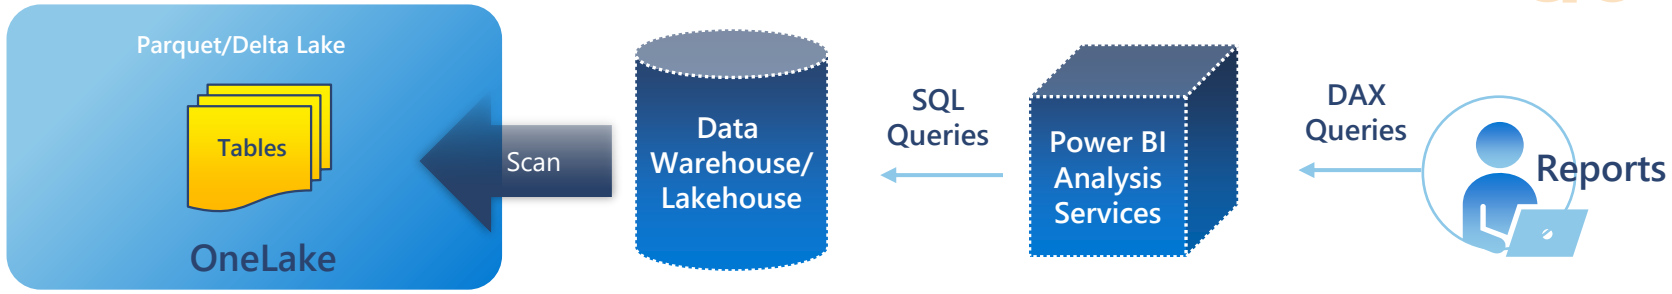

“Import Mode”

Latent & duplicative but fast

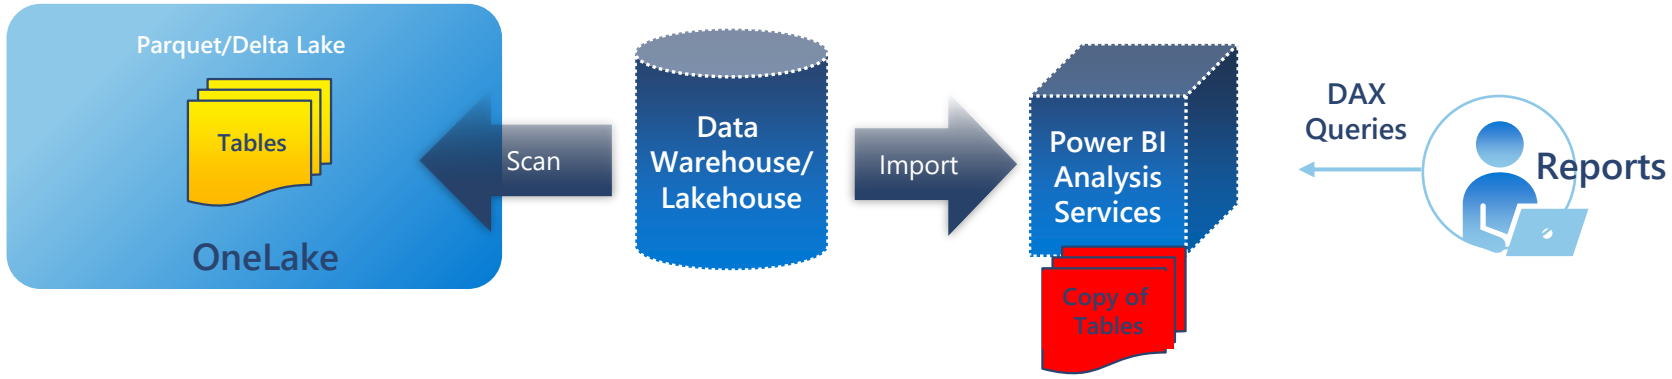

"Direct Query Mode"

Slow, but real time

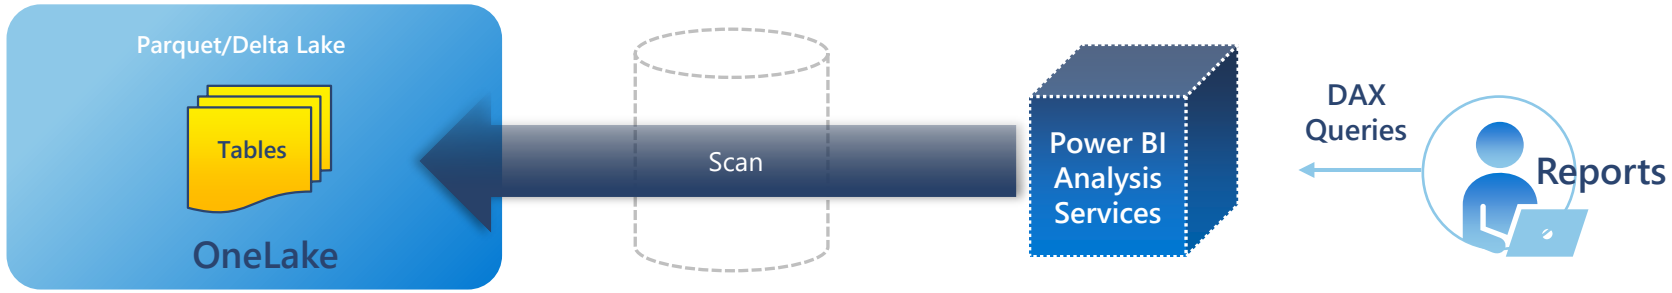

"Import Mode"

Latent & duplicative but fast

"See-through Mode"

Perfect!

other cool stuff

Devops

- Almost everything should be supported in git and Azure Devops
  - fabric-cicd and fabric cli are your best friends!
  - binding objects and connections is the real challenge
- You can use the built-in Deployment Pipelines
  - but you have more control using code and real CI/CD pipelines
- Use **variable libraries** to make your pipelines more dynamic

F512	P4	$67,276.80	~$40,000
F1024	P5	$134,553.60	~$80,000
F2048	-	$269,107.20	

Azure SKU can be paused can scale up or down

when below F64, every user needs Power BI Pro license

new: with F reserved capacity you get ~41% discount

basically Power BI Premium

conclusion

Data Engineering
Data Warehousing
OneLake Storage
Service Telemetry

is Fabric production ready?

… but it (still) has a lot of promise
